

BayScapes for Businesses Workshop

June 24, 2009

8 am - 11 am

Dominion Riverside Campus

DESCRIPTION

BayScapes are environmentally-friendly landscapes that create wildlife habitat, utilize native plants, conserve water, and prevent pollution; all for the benefit and restoration of the James River and the rest of the Chesapeake Bay watershed. Would you like to learn how to implement these principles at your business? Whether you are looking to start new or update your current landscaping, this workshop is for you!

The workshop will cover the various aspects and benefits of BayScaping and how you can successfully implement these practices at your business. Practices range from reducing amount of fertilizer used to installing a green roof. A landscape architect will share his experiences with applying these practices. Participants will also have a chance to see this conservation landscaping practice in action with a visit to Tredegar BayScapes Educational Garden.

Tredegar BayScapes, Richmond, VA
