Gender in the landscape: how to design for resilience

Jessica Barnes, PLA.

The answers to these questions will be revealed during the presentation. You might need to know them for the quiz.

1. The five drivers of disaster resilience are social, economic, infrastructure, institutional, and ______ capacity. (fill in the blank)

2. The four areas of impact discussed that have the potential to affect women differently are safety, transportation, ______, and inclusion. (fill in the blank)

3. True or false: Women are more likely to experience worse outcomes in disaster compared to men.

4. When designing for improved safety, which intervention might you consider?

5. What is the term for “well-intentioned actions or words based on inherent gendered stereotypes”?

6. Why does transportation impact women differently than men?

7. Studies have connected access to green space to ________ reproductive health outcomes for women. (fill in the blank)

8. Gender mainstreaming is the intentional, deliberate act of normalizing ________ to consider how any planned decision, policy, or program might impact both women and men. (fill in the blank)

9. True or false: There are many examples of gender mainstreaming in the United States.

10. How can you support gender mainstreaming in landscape architecture and in your practice?
